

Fiberglass or Polypropylene? We make both!

Custom Composites has been in business for 36 years serving the needs of fire apparatus manufacturers for the last 26 years. We offer fiberglass and polypropylene tanks in standard configurations or custom. We are centrally located in the United States, which saves you money on shipping and you get your tanks faster. The Custom Composites staff is highly experienced and motivated to build your tank to the highest standards. Our tanks are custom made to the exact specifications of our clients. A custom tank without the custom price. You supply the specifications for your tank and our professional design team will provide a CAD drawing for your approval.

All of our tanks are built to NFPA standards. Our fiberglass tanks come with a high gloss white gelcoat and polypropylene tanks come in standard black. Other colors are available if needed. We have an excellent warranty and technicians that can modify your tank in the field, should you need it. So whether you need a 50 gallon slip-in unit, a 3,000 gallon T-tank, or anything in between, give us a call. Let us be your "ONE STOP SHOP" for fire apparatus tanks.
